What's New In Train Track?

Train Track is a self contained CRM system that allows a company to record employee training and compliance training requirements. Train track can generate reports or csv files containing the employee name and the compliance certification each employee received. The TRAIN TRACK system provides business and management employees with an easy way to maintain compliance with employee training requirements and manage employees. This program can be used as a replacement for your existing training system or as a supplement. Train Track includes two areas. The Compliance Training section is where companies can maintain records of employee attendance, compliance with training, and csv files with compliance certifications. The Training Management area is where companies can design training programs, record and track attendance, and log daily schedule changes. The training management area allows companies to set up different levels of employees, choose a training schedule, and assign multiple trainings to multiple people. Companies can even assign training to automated systems. Once trainings are assigned, the TRAIN TRACK system records their attendance and certification. The Compliance Training section of Train Track will continue to manage these employees' training records even after the training ends. This allows companies to continue compliance and tracking of employees with Training Certifications. The TRAIN TRACK system provides the following features and modules: Salesperson Attendance Tracking: This feature allows companies to track employee attendance for training. This can be done either by individual attendance, where attendance is tracked by each employee, or entire crew attendance, where each employee can report attendance. Each attendance can be recorded in the compliance training section of TRAIN TRACK. This allows companies to ensure employees are attending compliance training. Compliance Training Certificate Data Storage: TRAIN TRACK provides the ability to keep data pertaining to compliance training certificates. This can be stored in the CSV (Comma Separated Value) format or in an optional SQL Express database that is included. This enables companies to store their data with TRAIN TRACK, leaving companies to transfer their data elsewhere when they no longer need TRAIN TRACK. Compliance Trainings Querying: Companies can create queries to determine which compliance training has been completed by a group of employees. Once queried, employees receive a

compliance training status report that consists of the following sections: * Employee Name * Compliance Training ID * Completion Date * Compliance Training Certificate * Compliance Training Duration You can set up a List of Compliance Training Certificates where employees can see the training certificates for each compliance training completed. Employees can export compliance training certificates
