References External links Category:2018 software Category:Autodesk Category:AutocadQ: SQL Query returning duplicate results I am using SQL for the first time, I have two tables one of which has entries that have been modified by a second table, I want to get a list of results that match each modified entry based on the ID field. Table 1: | Id | UserID | Modified\_by | Time | +-----+-----+-----+ | 1 | 1 | 2 | 6:30 | 2 | 1 | 2 | 6:30 | 3 | 1 | 2 | 7:00 | Table 2: | Id | Modified\_By | Time | +-----+-----+ | 1 | 2 | 6:30 | 2 | 2 | 7:00 | So what I would like to do is get a list that includes all of the results from table 1, except for the one that has the same userid/modified by and time, so the final list should include: | Id | UserID | Modified\_by | Time | +-----+-----+ | 1 | 1 | 2 | 6:30 | A: One way to do it is this: SELECT T1.\* FROM Table
