What's New in the NDIR?

----- A tool that can produce a complete list of all directories within a network, organized by the root name, file and folders along with sub-folders. The program supports IP Addresses, and can even generate a free workgroup proxy if required. NDIR usage:

----- While using NDIR, you will see a complete list of all directories and file/folders within a network, organized by

the root directory. You can click on the directory name, then the 'S' scroll bar' on the left to view the full path to the directory, and its sub-folders, using the 'Send to' function in the right-click menu. You can also use the 'Send To' menu in the 'Menu' bar to send the directory/folder information to a workgroup member or user on the same network, or email the information to a mail address. You can also export the directory contents by selecting the directory name using the 'Send To' menu,

then clicking on the '***X***' to save the contents into a text file. You can save a directory in '***.nim (very simple) *' format, or '***.nif (Windows) *' format, or '***.nip (Macintosh) *' format.

***Requirements: ----- - A minimum of 64 MB of RAM. - The Java Runtime Environment (JRE) version is 6.0 or later. - Windows 2000 or newer. - Send To or Export directory to text file will work in Windows 95 and later as well as in Mac OS 9. - For all other features, you will need to be logged in to an Windows
