D.I.A. - I Can Love D.I.A is a funky new beat coming from the heart of Trinidad. This track is one of the most interesting and refreshing tracks I have heard for a while. Very hypnotic and unique D.I.A must listen. D.I.A. on MySpace:D.I.A. is the Godfather of Reggae in Trinidad. He started the first music movement in Trinidad and is known as a musical genius, a revolutionary, a poet, a writer, a singer and an actor. By over 14 years he has had much success in his music and the development of his voice. He has worked with many international artists and has several music albums to his credit. I Can Love is a review, snapshot and responses of the artist, music videos, album reviews and news items. I Can Love on Facebook:Find the latest news and links about D.I.A. on Facebook.FIG. 1 illustrates prior art security systems 100 that can be used in a wide range of settings, from building automation systems to building perimeter security. As shown, the security system 100 of FIG. 1 includes a plurality of sensors 102 that are coupled to a controller 104. The controller 104 is in turn coupled to a display 106 and a user interface 108 via a network 110 (e.g., a local area network, a wide area network, a wireless network, etc.). According to this basic configuration, the controllers 104 can be wired or wireless, and can be networked together, via a network 110 for centralized management and/or remote monitoring. In general, the systems 100 of FIG. 1 provide monitoring and/or control of one or more physical items (e.g., doors, hall lights, switches, temperature sensors, security sensors, etc.), and can operate to perform system management functions, such as interfacing with a user (e.g., a human) via the user interface 108. More particularly, the security systems 100 can monitor and/or control the physical items, and can send status information and data to the user interface 108 via the network 110. For example, the security systems 100 can be configured to detect events such as the opening of a door or the detection of motion or sound, and can be configured to respond by turning lights on and off, or by activating alarm systems such as a siren. In other systems, the security systems 100 can be configured to detect and react to breaches of the

Q: Creating a jQuery plugin for a jQuery plugin I'm trying to create a jQuery plugin that will add (and remove) attributes to a jQuery plugin. I have written this simple plugin, which uses the "add attributes" part of the plugin, but can't get the "remove attributes" part to work. (function(\$){ \$.fn.ddadd = function(options) { var settings = \$.extend({ className: 'ddadd' }, options); return this.each(function() { \$('', { 'class': settings.className, 'data-remove': 'true', 'data-add': 'true' }).appendTo(this); }); })(jQuery); For example, say I have an element: This is one of the items in the list What I want to do is have the "add" button add this attribute to the original li, but remove the add button when it's clicked: This is one of the items in the list I can successfully remove the attribute using: \$(''.ddadd').removeAttr('data-add'); Can anyone help? A: You have "data-add="true" as a literal attribute which means it will be removed when that attribute is removed. If you simply want to remove data-add on clicks, try this: \$(''.ddadd').click(function () { \$(this).removeAttr("data-add"); });
