Credit: Adobe The layers and masks, which are on separate panels that are typically hidden, make working with Photoshop simple. They allow users to create multiple overlay layers, either on the same layer or on separate layers, and remove, add, or modify any part of any layer. To create a layer, a user selects Layer>New>Layer and opens the Layer dialog box. In that dialog box, a user specifies which type of layer he or she wants, such as a regular layer, an adjustment layer, or a selection. Then the user selects the main part of the image that he or she wants to apply the new layer to, and clicks OK. When a user applies layers to a new document, the program applies them to a new layer group called the document-wide group. Sharing Work and Figuring Out How to Get Help Every layer has a relationship with the layer above it. So when you apply a new layer, it's automatically placed on top of the layer above it. To edit or modify the layer, you first need to select it and then make changes to its setting or properties. To select a layer, click its thumbnail in the Layers panel, or right-click it and select Select Layer. The layer is then highlighted in the Layers panel. To select an individual layer by clicking, holding, or Ctrl-clicking on it, double-click it, and then select a tool from the toolbox. For example, to make all the layers visible, use the rectangle tool, click the thumbnail of the first layer, and then select Visible from the toolbox. When the layer is selected, click a tool again to use it. Click the layer thumbnail again to select a different layer. You can select multiple layers and manipulate them simultaneously by Ctrl-clicking on them, then using the selection tools to make the layers visible and edit them individually. Some images require additional layers. At the bottom of the Layers panel, a white arrow indicates that this layer is the active layer. By clicking it, a user can create a new layer. Adobe includes a variety of example files with PSD (Photoshop document) files to help users get started with Photoshop. But if they get stuck, the help files at the bottom of the Layers panel indicate that they can go to either Adobe's Community website, or the Photoshop website to find help. Some people prefer the online tutorials, but the advantage

At last, the full bin Laden collection is coming to public attention with the release of a CIA declassified report on the man they called "the world's most wanted terrorist". That little word 'terrorist' is a useful bit of framing. I don't know much about Osama bin Laden. The CIA did. What that report actually reveals is that he was an idea that was manufactured, a cabal of retired military men that met in some safe house, a coup d'etat designed to overthrow an elected government and install a new regime: a regimented rule of terror. The Bin Laden myth is one of those wonderful things in the American dream, created by the media, by politicians and by Americans who do not believe the government. It was the product of a singularly manipulative campaign. For Osama bin Laden was exactly the kind of idea required to incite the kind of response that required a complete reorganisation of the American military machine, a plan that was run by a group of retired military officers. When the Bush administration finally released the full CIA report on Osama bin Laden yesterday, you will not see a word about where he came from or what role he played in the Afghan war, or how he funded his army. Instead, you will get some thin gruel in the official media. In any case, it's not really about the full facts of who Osama bin Laden is, it's about a much more important story that's been repressed for all these years. That is the story of the covert coup that took over the US government under President George W. Bush. The CIA Bin Laden report is the media equivalent of a blue dot on a map. In the end, it's just a story that proves that the man was controlled by the American military, and the military's public policy agenda. The CIA report, you will find it on the PDF site, is short and very telling. It opens with a few quotes, including "Bin Laden was a physician who graduated from King Abdul Aziz University Jeddah, Saudi Arabia, and later completed residency in orthopedic surgery at King Faisal Hospital, Dammam, Saudi Arabia, where he became a fellow." It notes that "Bin Laden was also an investment banker." The CIA document is rather unimpressive as a result, but it reveals much of the media story nonetheless. In this, it is exactly the same as the revelation that a small group of retired military
