[Extra Speed] Finura Font

Description You are downloading finura font, which belongs to the category Fontic. This font version is 39r.It was created with font program(s). The filesize is 13mb. Finally I created this font, but I have 2 problems 1 - I don't know how to use html code, when i've tried to change the size of the font and select it as the style, the font become bigger and it doesn't look like the size I've set in my css. 2 - The spacing of the font don't set to 0px. I read this questions (How do I make sure the line spacing is set to 0 on this font?) and even tried that, I saw the code but I still don't know what should I do with it. I'm testing it with the css code of 3 websites, as I post below, the problem is that in the first part (the script code) there are spaces between the lines of the script, I want that this part of the code doesn't has any spaces (I'm using a gedit text editor) The css code I used is the one from the 2nd website, and the spacing I don't have is on the line with the word Speed. I don't understand why doesn't it work, it's when I was testing if the css was working at all, and I changed my css code to the code provided on the next website and I saw that the line spacing is correct. The other css code I used is from a third website, but I wasn't able to find it anymore. I did find some lines of code on line 14 that I wanted to add as well, but I thought it was some extra code, it was the spacing code, so I deleted it. Thank you in advance and sorry for my bad english, I've tried to use google translate and not much other english speaking sites, if you can understand, this is something that I want to resolve with your help and not with my google or whatever translate. A: First, your script is not encoded as UTF-8. Second, your HTML page is expecting UTF-8 (and PDF too), but there's no header or meta tag. When you put , then you have UTF-8. If it doesn't work, try also
