Q: CLI for node.js I am currently learning node.js and I wanted to know if there was any CLI tools for node.js that can be used for several reasons, such as startup script, automatically configuring a development environment etc. I know this sounds a little weird, but I wanted to make certain apps start automatically without any interaction. Like so: `./myapp -start` And the app would spin up. But I want to know if anyone has experience with this.

A: I'm not aware of any built in tool but there is a great article written on node-init.

Q: Why is my regex not matching? I'm trying to parse a string which consists of multiple lines. Each line starts with a month and the year and looks like that: "Subject"="2004-01-01"

In my Perl program I try to match each of the lines to a regex. But I do not get the expected result. All matches are empty strings:

```
my $x = "Subject"="2004-01-01";
my $re = qr/Subject=/;
my @y = split //, $x;
for my $i (0..$#y) {
  print $y[$i] if ($y[$i] =~ /$re/);
  print "match: ";
  print " $y[$i] ";
  print "search: ";
  print " '$re' ";
}
```

Output: match: '2004-01-01' search: 'Subject' =2004-01-01

The search pattern (\$re) should match "Subject"="2004-01-01" because it consists of 'Subject', the actual text which should match, and '='.

What is wrong with my code?

A: From perlre When a regular expression is first evaluated as a string, any backslash used in the regular expression itself is evaluated as a
